1 Introduction

This manual provides user instructions to properly operate and maintain the SCA 3600 Support Cleaning Apparatus (SCA).

How to use this guide

This User Guide is laid out in easy to follow sections that cover Setup, Operation, Maintenance, and Troubleshooting. Read each section carefully so you will get the best performance from your cleaning system.

Safety precautions

For your own protection and to ensure proper operation of the SCA please follow these safety precautions. Failure to use the SCA for the intended function may result in personal injury and will void the warranty.

- Do not operate the SCA until you have read and understood this user manual.
- Use the power supply voltage as noted in the Specifications section of this manual. Avoid overloading the electrical outlet with multiple devices.
- Use only the power cord supplied by the manufacturer. Replace a damaged power cord with one approved by the manufacturer.
- Ensure the system is well-grounded. Plugging the SCA into a Ground Fault Interrupt (GFI) or similar protected outlet is recommended.
- Always power off and unplug the SCA from the power outlet when it is being cleaned, moved or serviced.
- Do not use the SCA for any purpose other than removing soluble support material from 3D printed parts.
- Wear thermal gloves and safety glasses when working near the SCA.
- Do not allow aluminum or zinc to come into contact with the WaterWorks cleaning solution. WaterWorks contains sodium hydroxide.
- Do not use any liquid other than water and Stratasys cleaning solution products in the SCA.
- Before disassembling or attempting repairs on the system, contact Technical Support as directed in the Customer Support section of this manual.

The following classifications are used throughout this guide and/or marked on the SCA.

General Warning

![Electrical Danger]

Electrical Danger
2 Overview

The SCA 3600 Support Cleaning Apparatus (SCA) is designed to remove soluble support from ABS, PC, and nylon FDM parts using WaterWorks or EcoWorks cleaning solutions.

How it works

The SCA removes support material by immersing parts created with soluble support material in a heated bath of water with a specific amount of cleaning solution added. The SCA circulates the water around the parts in the tank. The hot solution dissolves the support material without harming the underlying model material. The time required to remove the support material depends on model geometry and the total amount of support material. When the soluble support material is completely removed, models are unloaded from the SCA, rinsed, dried, and ready for further finishing or use.
Startup kit contents

The items shown in the figure below are shipped with the SCA 3600.

Note: WaterWorks and EcoWorks cleaning solutions are purchased separately and available from any Stratasys reseller.

3 Setup

Locating the SCA

To maximize ease of use and operational safety, make sure the following preparations of the physical site are met:

- Shipping carton + pallet dimensions: 105.0 x 70.0 x 129.5 cm (41.3 D x 27.6 W x 51.0 H in).
- The system must be placed on a level floor able to support 204 kg (450 lbs.), the system weight when filled with water.
- The electrical outlet must be located within 2 m (6 ft) of the SCA. Do not use an extension cord or power strip with the system.
- The SCA should be near a grounded wall outlet such that the power cord does not pose a hazard to people or equipment passing by.
- The grounded electrical outlet (208 - 240VAC, 20A, 50/60Hz, single phase) must connect to either the provided European (CEE 7) or US (NEMA L6-20P) power cord plug. For Australia/New Zealand use a cord set with the following parameters:
  - Plug: AS/NZS 4417 Australia 15A
  - Connector: IEC-60320-C19 right angle
  - Cord: H05VV-F jacket, rating 15A, 250V
  - Conductors: 1.5mm² x 3
- The power cord plug-in receptacle is a disconnecting device that should be easily accessible at all times. Position the unit so that the plug can be easily reached.
- It is strongly recommended that the unit be placed on a circuit with its own GFCI breaker.
- Place the unit in a well-ventilated area.
- The operating environmental temperature must be between 5°C - 40°C (41°F – 104°F); and operating environmental humidity between 0% - 80% RH.

Preparations for draining and disposal

- Consult your local regulations regarding disposal of the cleaning solution effluent prior to use. A permit or form of pre-treatment may be required.
- The SCA relies on gravity to drain the cleaning tank. Locating the system near a floor drain may be convenient depending on local regulations for wastewater disposal.
- Distance from center of drain tube to floor: 43.8 cm (17.3 in)
- Use of a graywater tote facilitates draining the cleaning tank and provides transport and/or storage of the effluent for later disposal.

Figure 4 Example of graywater tote
4 Operation

Filling and setup

Adding water

Fill the tank with water to just below the MAX line as shown, taking into account that the parts and basket will raise the water level when lowered into the tank.

Figure 5 Liquid fill lines

⚠️ DO NOT use hot water. The addition of WaterWorks to water is a heat-releasing reaction and if added to hot water will result in dangerous spattering.

Never operate the tank unless the liquid level is above the MIN line as shown.

Adding cleaning solution

Use either WaterWorks or EcoWorks cleaning concentrate in the SCA; both are available from Stratasys resellers.

If using WaterWorks:

While wearing protective gloves and eye protection, add two bottles (950 grams each) of WaterWorks soluble concentrate to the water-filled tank. Exercise caution when working with the cleaning solution. WaterWorks contains sodium hydroxide.
If using EcoWorks:

1. Open the foil cleaning agent bag as shown.

2. Empty all the contents of 13 (thirteen) foil cleaning agent bags into the water-filled tank. Avoid handling the contents of the cleaning agent bag.

Preheating and starting the cleaning cycle

Setting cycle time and temperature

<td>Nylon</td>
<td>50, 60 or 70°C**</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**depending on part wall thickness and desired dimensional accuracy.

For Polyjet parts select the ‘HEAT OFF’ option.

Connect the power cord to the SCA and then to a suitable grounded receptacle.

Power on the SCA using the main power ON/OFF switch located at the rear of the unit.

Press one of the four temperature preset buttons or the Heat Off button to select the cleaning temperature. The temperature can be changed at any time during the cycle by selecting a different temperature button. The SCA heats at a rate of about 1 degree/3 minutes.

Press the SET button and then press the up and down arrows to set the minutes. Press the SET button again and use the up and down arrows to set the hours. Press the SET button again to accept the time. Press the button to start the heater and pump.
Loading parts and testing level sensors

Wait until the SCA has reached the desired temperature before loading parts into the tank. This minimizes the time the parts are immersed in the cleaning solution.

To load parts for cleaning, place parts inside the large cleaning basket. If cleaning small parts, place the parts inside the small basket and set the small basket inside the large basket. Close the basket lids.

Before placing the basket into the cleaning solution, press the button to pause the heater and pump. With the basket cutout facing the nozzle, slowly lower the large parts basket into the solution-filled tank. The flow nozzle should be centered on the basket cutout.

If the high level alert lights and the alarm sounds, press the button to silence the alarm, and remove liquid until the alert indicator is no longer lit.

Note: It is recommended that the level sensors be tested periodically. Adding water to just above the MAX fill line should cause the high level alert to illuminate and the buzzer to sound. Draining water until the liquid level is below the MIN fill line should cause the low level alert to illuminate and the buzzer to sound. If the level sensors are properly working the system will not operate until the liquid level is between the MIN and MAX fill lines.

Close the lids on the SCA to prevent heat loss and evaporation. Never place your face near the tank when opening the lid – vapors from the cleaning solution may cause eye and respiratory irritation.

Cleaning the parts

To activate the cleaning cycle after setting the time and temperature, and adjusting the liquid level, press the button. Illuminated bars will sweep under the temperature display when the pump is operating.

Parts can take a few hours or longer to clean. Cleaning time is affected by the size of the part, the amount of support material, part geometry, and the pH level of the cleaning solution.
Parts can be checked at any time during the cleaning cycle by opening the SCA lids and slowly lifting the large basket from the cleaning solution. Rest the front of the basket on the inner tank rim and the lower rear basket lugs (pins) on the support brackets.

Figure 6 Basket supports

⚠️ Protective gloves and eyewear should always be worn when lifting the basket from the tank.

If the parts are clean before the end of the cleaning cycle, halt the cycle by pressing the button.

Completing the cleaning process

Removing parts from the SCA

When the parts are clean they can be removed from the SCA. Halt the cleaning cycle by pressing the button if removing the parts before the timer has finished count down. Open the SCA lids and slowly lift the large basket from the cleaning solution. Rest the basket over the tank by setting the basket lugs (pins) on the support brackets and inner rim of the tank. Protective gloves and eyewear should always be worn when lifting the basket from the tank or handling wet parts prior to rinsing.
Let the basket rest above the tank while draining. After draining, remove the parts from the basket and rinse them with water to remove any residual cleaning solution. Air dry or pat dry with a soft cloth or paper towels.

**Readiness for the next cleaning cycle**

After removing recently cleaned parts, lower the large basket into the tank and close the lids. If the SCA is used periodically, use the 50°C temperature preset to maintain the water at an elevated temperature. This will shorten the time required to heat the water to an optimal cleaning temperature of 70°C or 85°C while still conserving energy. Alternatively, the SCA can be turned off by pressing the ON/OFF rocker switch at the back of the unit.

If the SCA won’t be used for an extended period of time, all liquid should be drained from the tank and the power cord removed from the wall receptacle.
5 Maintenance

Draining the tank

For safety reasons, allow the cleaning solution to cool to room temperature before draining and wear protective gloves and eyewear while working with the effluent.

Power off the unit and unplug from the wall receptacle.

Ensure the drain strainer is in place at the bottom of the tank.

Attach a 1 inch (25.4 mm) inner diameter hose or tubing to the end of the drain tube. PVC tubing or equivalent will withstand the caustic properties of the cleaning solution.

Place the other end of the hose in a drain or suitable container for transporting the effluent. Use of a graywater tote provides transport and storage of the effluent for later disposal.

Figure 7 Connecting to a graywater tote for draining
Open the drain valve. After draining, make sure the valve is closed.

![Drain valve positions](image)

**Figure 8** Drain valve positions

### Disposing of solution

Consult your local regulations regarding disposal of the cleaning solution effluent.

Proper disposal requires the alkalinity (pH) of the used solution be reduced to allowable levels before disposal. The pH may be lowered by either diluting the solution or by neutralizing it with an acid such as malic acid.

If using WaterWorks, dilute the solution at a ratio of 5 parts clean water to 1 part used solution. More dilution may be required, please check your local regulations.

If using EcoWorks, a dilution of 1 part clean water to 1 part used solution is usually sufficient. More dilution may be required, please check your local regulations.

### Inspecting and cleaning the drain strainer

The strainer should be cleaned every time the tank is refilled to keep it free of debris.

Never remove the strainer if the tank is filled with used cleaning solution. Doing so allows debris to clog the drain tube.

Remove the strainer by using the strainer handle to lift it up and out of the tank drain.
Scrub debris from the strainer using a nylon brush or tooth brush. Rinse with water. Verify all holes are unplugged before replacing the strainer in the drain.

Inspecting and cleaning the pump intake screen

The pump intake screen may become clogged with debris. This will noticeably reduce the flow in the tank.

Remove the intake screen by pulling down with sufficient force to unseat the fastening clips from the mating surface. Scrub debris from the intake screen using a stiff brush. Rinse with water. Verify all holes are unplugged before replacing the screen on the pump intake.
Cleaning the SCA

Apply mild soap and water with a sponge or cloth to clean the exterior surfaces of the SCA and the inside of the tank. Never immerse the system. Any liquid in the electronics area of the system may cause damage or system failure and void the warranty.

Contact the manufacturer for advice on cleaning the inside of the tank if stronger cleaning agents are required.

Moving the SCA

The SCA should always be drained before moving. Unlock the lockable casters before attempting to roll the SCA.
## 6 Troubleshooting

### High Risk of Electrical Shock

**Always disconnect the unit from power before removing the back panel!**

8 Customer Support

Contact PADT support

Technical support for this product is provided by Phoenix Analysis & Design Technologies, Inc. (PADT).

Before contacting technical support please do the following:

1. Try the Troubleshooting table in this manual or at www.SupportRemoval.com/support
2. Note the SCA model number, part number, and serial number (found on the back of the unit)

If the unit is covered by an extended warranty, contact the Authorized Reseller from whom the unit was purchased.

Otherwise, to receive technical support:

- send an e-mail to: sca@padtinc.com.
  Please include:
  - full name
  - company name
  - phone number
  - SCA serial number
- call 1-800-293-PADT and ask for SCA technical support.

Replacement and accessory parts

Send email to sca@padtinc.com or call 1-800-293-PADT for information on obtaining replacement parts or if interested in purchasing a graywater tote.
SCA 3600 Support Cleaning Apparatus Limited Warranty

<table>
<thead>
<tr>
<th>Product</th>
<th>Limited Warranty Period</th>
</tr>
</thead>
<tbody>
<tr>
<td>SCA 3600 Support Cleaning Apparatus</td>
<td>1 year</td>
</tr>
</tbody>
</table>

All new Support Cleaning Apparatus (SCA) systems are warranted exclusively by PADT, Inc.’s (“Manufacturer”) limited warranty as follows:

Each Support Cleaning Apparatus system (“System”) and its components (“Components”), except those listed below under limits and exclusions, is warranted against defects in the materials and workmanship for a period of one (1) year from the date of installation at the end user’s (“Customer”) facility.

Repair or replacement only: manufacturer's liability under this agreement shall be limited to repairing or replacing, at the discretion of manufacturer, parts, or components sufficient to return the system to conform to the marketing specifications of the system.

Components subject to wear during normal use and over time such as paint, finish, light bulbs, seals, etc., are excluded from this warranty.

This warranty is void if the system is subjected to mishandling, misuse, neglect, accident, improper installation, improper maintenance, or improper operation or application, or if the machine was improperly repaired or serviced by the customer. This warranty is void if the system is not installed by a certified distributor and the proper installation documentation provided by the manufacturer has not been submitted.

Liability, whether based on warranty, negligence or other cause, arising out of and/or incidental to sale, use or operation of the system, or any part thereof, shall not in any case exceed the cost of repair or replacement of the defective equipment, and such repair or replacement shall be the exclusive remedy of the purchaser, and in no case will manufacturer be responsible for any and/or all consequential or incidental damages including without limitation, and/or all consequential damages arising out of commercial losses.

This warranty is transferrable from the original end user to another party if the machine is sold via private sale before the end of the warranty period.

The foregoing is a limited warranty and it is the only warranty by manufacturer. MANUFACTURER DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ALL WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.
